

Playroom

Designed to run on

multi device support

Simplified messaging for carers and parents

Easily add a new child to the app.

Select a prewritten message to quickly notify parents

Welcome to Playroom

A revolutionary streamlined iOS messaging application designed to make the life of child care workers easier.

With a few simple touches, messages are able to be sent from pre-defined lists directly to parents or guardians.

Playroom takes into consideration the days that children are enrolled and their age. By doing so, only the relevant children are displayed.

Messages are sent through Facebook Messenger and received on all major platforms including iOS, Android, Windows and Web.

Designed with Care

Just for Child Care.

Through communicating directly with child care staff during development, Playroom is able to work just right.

Playroom will provide child care staff with 'read' and 'delivered' notifications. Parents will be able to respond directly to the messages.

Playroom is secure and requires authentication in order to access sensitive information.

Ubiquity has worked with Kids Uni staff to produce a human centred approach that will react to the expansion and contraction of enrolments.
